

# PREMIERVerify SCN & PREMIERVerify SC

## Contact and Contactless Capabilities for Your Merchants

Implementing an EMV solution can be both an overwhelming and costly process for the typical Small to Mid-Sized Business. eProcessing Network offers two EMV-certified card readers, the Premier Verify SC and the Premier Verify SCN for both contact and contactless processing. Our secure readers help merchants process tap-and-go payments easily and affordably, and help improve transaction speed at checkout.

## Benefits for your Business

### PREMIERVERIFY SCN

The EMV-certified reader supports MSR, EMV-chip and NFC/contactless payments such as Google Pay and Apple Pay.

### PREMIERVERIFY SC

The high-speed, secure dual-track reader supports MSR acceptance anywhere the mobile merchant transacts, and is EMV-capable.

### EASY INTEGRATION

Both the Premier Verify SCN and Premier Verify SC work seamlessly with ePNJPOS, ePNPlugIn, and ePNMobile for iOS and Android platforms for the majority of devices and tablets.

### SECURE

The Premier Verify SCN and the Premier Verify SC readers support TDES encryption algorithms using DUKPT MK/SK key management.

### SUPERIOR CONNECTIVITY

Both the Premier Verify SCN and Premier Verify SC have Bluetooth 4.0 and Micro USB communication interfaces, and support over-the-air firmware updates.

### DURABILITY

The durable, lithium polymer rechargeable battery for both readers stays charged for 420 EMV transactions or 700 mag-stripe transactions.
